

## LISTING OF THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

### CLAIMS

What is claimed is:

- 1           1.     (Original) A method for monitoring a patient, comprising:  
2           generating a robot movement input command at a remote station;  
3           transmitting the robot movement input command;  
4           receiving the robot movement input command at a robot that has a camera and a  
5           microphone;  
6           moving the robot to view and hear a patient; and,  
7           transmitting an image of the patient and a sound of the patient from the robot to the  
8           remote station.
- 1           2.     (Original) The method of claim 1, wherein the robot moves across a floor of a  
2           medical facility.
- 1           3.     (Original) The method of claim 1, wherein the robot movement input command  
2           is generated by a doctor.
- 1           4.     (Original) The method of claim 1, further comprising transmitting a video image  
2           and a sound of a doctor at the remote station to the robot, the video image being displayed by a  
3           monitor of the robot, the sound being generated by a speaker of the robot.
- 1           5.     (Original) The method of claim 1, wherein the robot movement input command  
2           causes the robot camera to zoom relative to the patient.

1           6.       (Original) The method of claim 1, further comprising transmitting a video image  
2 of a medical chart from the robot to the remote station.

1           7.       (Original) The method of claim 1, further comprising generating and transmitting  
2 a question from the remote station to the robot.

1           8.       (Original) The method of claim 7, wherein the question is generated by a speaker  
2 of the robot.

1           9.       (Original) The method of claim 7, wherein the question is displayed by a monitor  
2 of the robot.

1           10.      (Original) The method of claim 1, wherein the robot movement input command  
2 is transmitted through a broadband network.

1           11.      (Original) A method for monitoring a patient, comprising:  
2       generating a plurality of robot movement input commands at a remote station;  
3       transmitting the robot movement input commands;  
4       receiving the robot movement input commands at a robot that has a camera and a  
5       microphone;  
6       moving the robot from a first patient room to a second patient room of a medical facility;  
7       and,  
8       transmitting an image of a patient and a sound of the patient from the robot to the remote  
9       station.

1           12.      (Original) The method of claim 11, wherein the robot movement input command  
2 is generated by a doctor.

1           13.    (Original) The method of claim 11, further comprising transmitting a video  
2 image and a sound of a doctor at the remote station to the robot, the video image being displayed  
3 by a monitor of the robot, the sound being generated by a speaker of the robot.

1           14.    (Original) The method of claim 11, wherein the robot movement input command  
2 causes the robot camera to zoom relative to the patient.

1           15.    (Original) The method of claim 11, further comprising transmitting a video  
2 image of a medical chart from the robot to the remote station.

1           16.    (Original) The method of claim 11, further comprising generating and  
2 transmitting a question from the remote station to the robot.

1           17.    (Original) The method of claim 16, wherein the question is generated by a  
2 speaker of the robot.

1           18.    (Original) The method of claim 16, wherein the question is displayed by a  
2 monitor of the robot.

1           19.    (Original) The method of claim 11, wherein the robot movement input command  
2 is transmitted through a broadband network.
